Please note that this portfolio invests in markets which keep different trading hours to South Africa which would affect pricing of currencies as well as that of the underlying instruments held in the portfolio. Accordingly, the return profile of the portfolio, which is priced in Rands at a point in time may differ to the official index return, in part, due to these reasons. The past portfolio performance is calculated on a rolling monthly basis, lump sum, NAV to NAV and distributions reinvested. Annualised return is weighted average compound growth rate over period measured. The investor performance may differ as a result of advisor fees (where applicable), actual investment date, date of reinvestment and dividend withholding tax. Past performance is not necessarily a guide to future performance. The lowest and highest returns show the lowest and highest consecutive 12 month return experienced since inception.
